# müga© Werkzeugmaschinen GmbH & Co. KG

Customized for you!

"The industry is changing. There have been many developments at müga® Werkzeugmaschinen GmbH & Co. KG, which are now reflected in our machine portfolio, our continually improved service, and our company policies in a positive way. müga Werkzeugmaschinen GmbH was founded by Mr. Helmut Müller and Mr. Peter Gary. The expertise can be traced back to STEINEL Werkzeugmaschinen GmbH, from which müga was founded in Villingen-Schwenningen in 1999. In February 2022, I took over müga Werkzeugmaschinen GmbH as the new managing partner through a succession plan, and since then, I have shaped the company with new ideas and approaches. It's an exciting time for my team and me, and not least for our 700 customers, whom we continue to advise and support individually with our years of expertise.

Together, we want to develop solutions that lead you to your manufacturing and application success. This is the calling of our work and our daily drive. Current technological developments offer us new opportunities. Let's work together to find smart solutions that propel you forward efficiently and add value. That's why our new company slogan, "CUSTOMIZED FOR YOU!" is our philosophy for the upcoming müga generation. With you, we want to leverage our years of accumulated knowledge and invest it in innovative application solutions. Our team is ready for new customer inquiries that challenge us.

We look forward to serving you!"

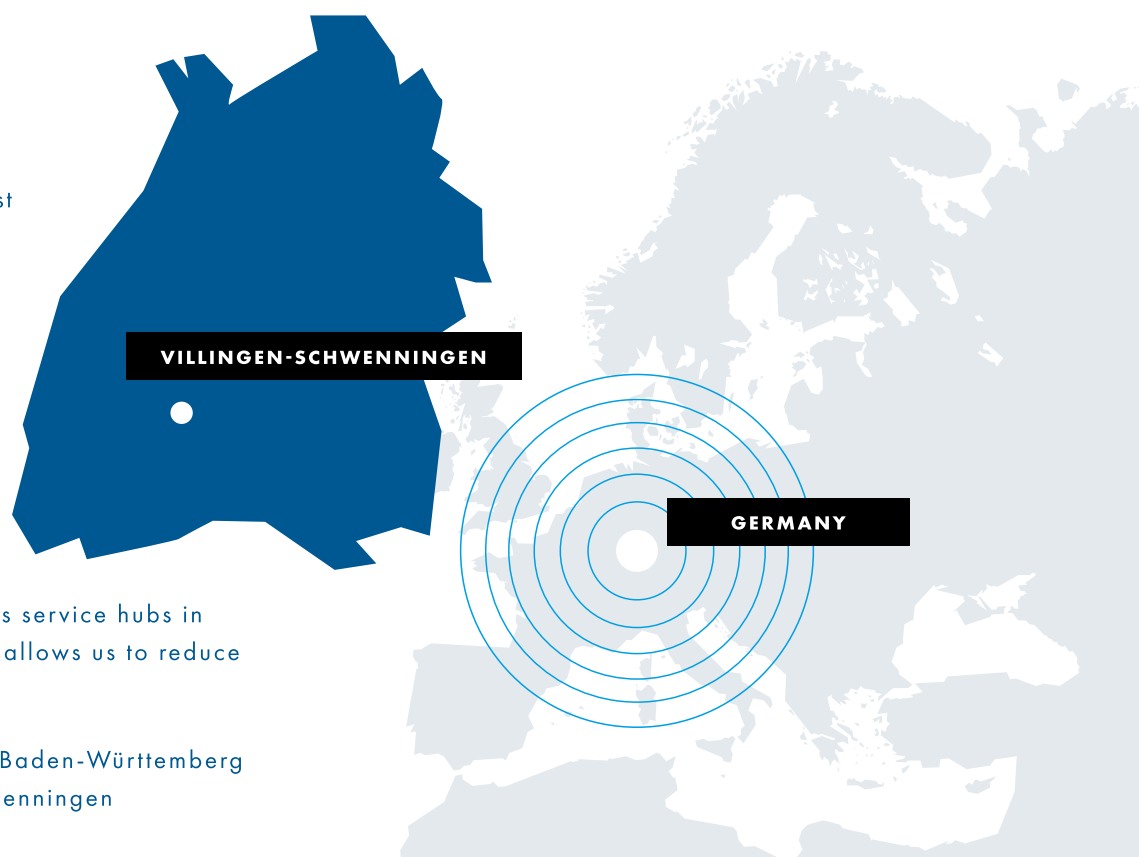

ANDREAS BLANK, CEO

## In the heart of Europe

### Our location

müga Werkzeugmaschinen is located in the Black Forest in Villingen-Schwenningen, Germany. The Stuttgart Airport (STGT) can be reached in approximately one hour. You can easily reach us by car via the highway A81. Due to our central location in Europe, neighboring countries are easily accessible for us. müga® has service hubs in Kassel and Stuttgart, which allows us to reduce service response times.

Country: Germany | State: Baden-Württemberg  
City: 78056 Villingen-Schwenningen

## Our machines

Two renowned brands with german tradition

### **müga center**

Our machines of the brand *müga center* are available in six product series. These include vertical and horizontal machining centers with up to 5 axes. Particularly noteworthy are our production machines of the S-Series with an integrated swivel table. The *müga center* program is very comprehensive and provides a suitable solution for many requirements. These machines are characterized by their compact design, speed, and high reliability.

### **müga turn**

You can achieve the highest productivity and best performance with the CNC turning machines of the *müga turn* series. With an extensive range of optional special equipment and automation possibilities, you can individually optimize your production. We offer a wide range of *müga turn* machines, from  $\varnothing$  3mm to  $\varnothing$  550mm. A highlight is the i-Series, which features a linear tool system. For instance, the *müga turn* iUltimate 2S has 2 spindles, 10 axes, and 48 tools.

### **Trade fairs**

You are welcome to visit us at the trade fairs. The photo shows our stand at the AMB (International Metalworking Exhibition) in Stuttgart, Germany as an example.

# Services

Production | CAD Design | Automation

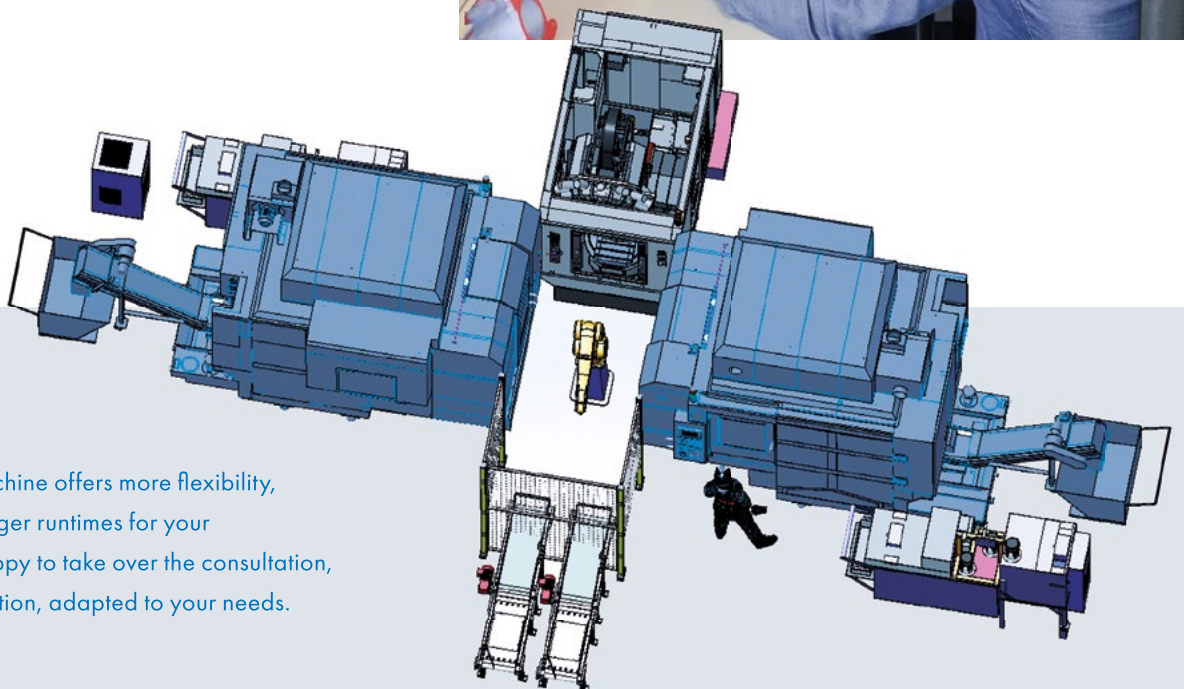

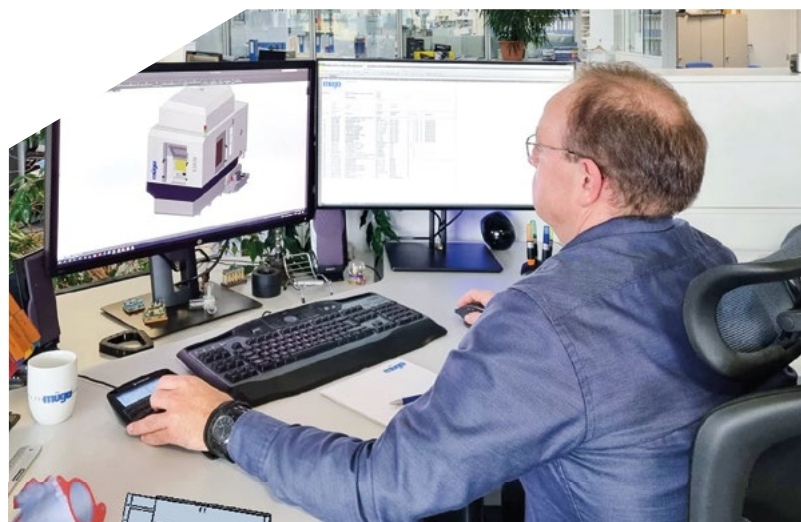

## Production

müga® maintains a large inventory of machines. This is how we can achieve short delivery times. Each machine is fully assembled and commissioned at müga.

Our experienced employees ensure the precise assembly and commissioning of each machine. Stringent quality standards according to German norms ensure that every müga® machine meets the highest requirements. Before leaving our factory, each machine undergoes test runs to ensure its flawless functionality. We cordially invite you to visit our facility and witness the performance of our machines live in action.

## CAD design

Our CAD team works on several Solid Works 3D CAD workstations. No matter if simple sheet metal or complicated hydraulic clamping devices. We are very familiar with the requirements of construction. Together with requirements and develop a clamping system for your workpieces. We're pleased to take over the complete design of the fixture and set it up in the machine.

## Automation

Automation of your machine offers more flexibility, less manpower and longer runtimes for your production. We are happy to take over the consultation, design and implementation, adapted to your needs.

## Services

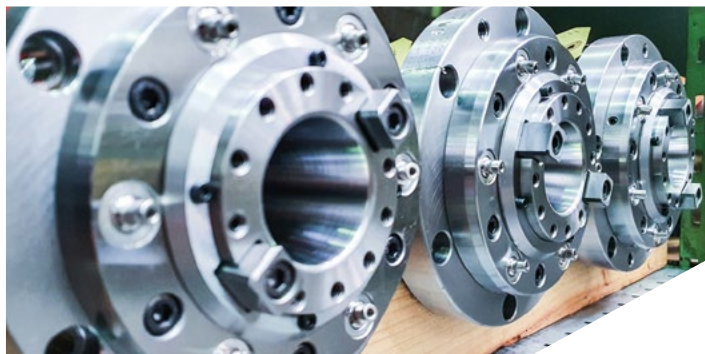

Maintenance | Spindle service | Sparepart warehouse

### Maintenance

Reliable maintenance is essential for trouble-free production. Our experienced employees advise you on the free service hotline or personally on site and provide assistance so that your machine always remains ready for use. The müga-Technik team is on the road for you throughout Europe and takes care of maintenance, retrofitting or the installation of service parts.

### Spindle service

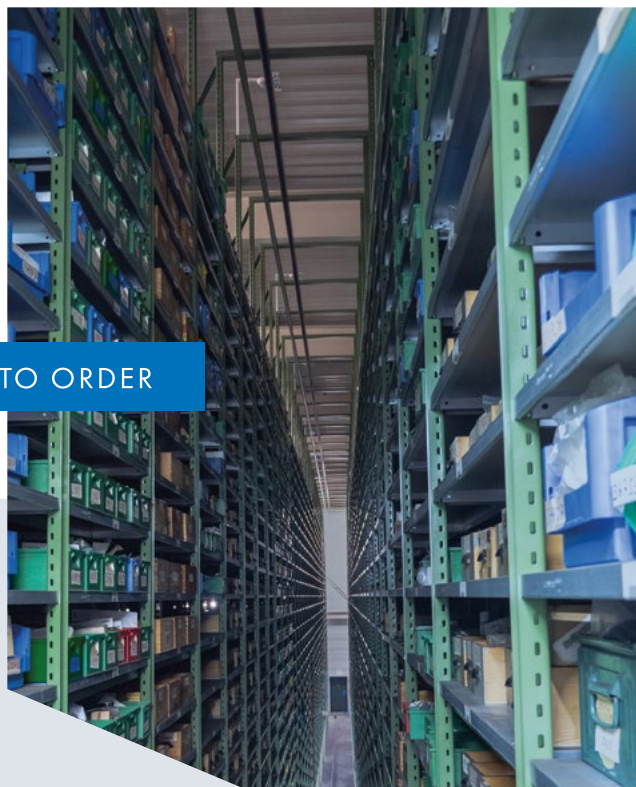

To ensure that your spindle always remains operational, we offer professional repair and overhaul. For example, we take care of new bearings, adjustment, grinding and balancing. After a successful assembly, each spindle is run in at our spindle run-in station under temperature control. Of course, we can also supply you with a new spindle or carry out the replacement on your premises.

WAREHOUSE WITH OVER 20'000 ARTICLES TO ORDER

### Spare parts

A reliable spare parts warehouse is the backbone of any successful service operation. It ensures that action can be taken quickly and efficiently in the event of an unexpected failure. This in turn minimises production downtime and keeps your operating costs low. At müga machine tools we understand how important this is and have therefore continuously expanded and optimised our spare parts warehouse.
